

gyakorlati cuccos lesz most.

rendszertünetek-fa.

plusz infót tárolunk.

relációban hány cucc van.

update-elni kell a bővítésinfót

4. elemet rekurzív. REKURZÍVAN. gyakorlati indoklás 10-es leír. ennyi. A2

rmkrees(13, 4) a 13 a 6. elem, még BALRA csúsztat.

rmkrees(7, 4) 1 db nulla kisébb van. JOBBRA megmozd.

rmkrees(11, 2) 4 - (1+1) kitélen 2 db nulla kisébb elvett találunk.

rmkrees(9, 2) a 9 a 2. elem.

↑ balra léptetést, majd.

rmkrees(10, 1) ennyi.

maxim: 8-at! rekurzív

6. a rangja 8-at ha => jobbra!

rmkrees(13, 8)

8 - (5+1)

5 es = 13 a 6

rmkrees(32, 2)

32-es a 3. 2-at ha => BALRA!

rmkrees(20, 2)

20-as a 2. es kell!

□

Hányas(milyen rangja) a 11-es?

1) Megjegyzés a 11-es! $O(\log n)$

2 db kisebb érték van nulla, és fix. de ennyi több is van

2

11-esre. FELLEPTÜNK. A 7-be. 7-es es 4-ai balra van több kisébb. 2 + (2)

①

Innen felmegyünk. 13-ashoz. a 7-es balfiát vett, ennyire

$$\underbrace{2}_{11} + \underbrace{1+4}_{7} + \underbrace{0}_{13} = \underline{4} \quad \text{a rangja tehát } \underline{5}.$$

59-re ugyanez:

59-nél kisebb.

(59)

(32)

(13)

$$1 + 2 + 1 + 5 + 1 = 10$$

59 rangja 11.

felmegyünk a 32-re jobboldal megyünk
